

Redis Enterprise Administration Private Training Class

This 2-day private administration training class introduces core Redis Enterprise database concepts and provides best practices for installing, administrating, monitoring and troubleshooting its cluster software. It provides a balanced overview of administration topics and simulation of real-world operation challenges and scenarios for trainees at all levels. It can be delivered by the Professional Services consulting team virtually or onsite (when circumstances permit) with a format that mixes lesson lectures with hands-on lab exercises. You can have up to 12 trainees attend the class. Virtually-delivered sessions will be recorded and made available upon completion of the training course.

Day 1 Training Topics

- * Redis OSS Database Introduction
- * Redis Enterprise Architecture Overview
 - Concepts & terminology
 - Replication, persistence & performance
- * Redis Enterprise Software Installation
- * Cluster Administration Across Nodes
- * Basic Database Administration
- * Hands-on Lab Exercises

Redis Enterprise Architecture

Day 2 Training Topics

- * Database Scalability
- * High Availability and Persistence
- * CRDB Active-Active Clustering
 - Disaster recovery
- * Cluster Monitoring and Event Logging
- * Redis Enterprise Security
 - Access control lists
- * Hands-on Lab Exercises

Replication & Disaster Recovery
